

DVWDesign Figma AI Framework

May 2026

The Problem Every Design Team Knows

When design, code, and documentation live in separate tools —

- Diagrams go **stale** the moment architecture changes
- Design handoffs **lose context** between Figma and the codebase
- 14 teams maintain **14 disconnected** sets of documentation
- PNGs in pull requests are **barely legible**
- Links in docs point to **deleted FigJam files**

The result: teams spend more time maintaining artifacts than creating value.

One Framework. Five Layers

Skills & Commands	→	/figma-diagram /figma-curate /figma-use
MCP Server	→	generate_diagram get_design_context curate_diagram
Scripts	→	export-figma-png sync-config scan-all-repos
Plugins	→	Custom Figma plugins for design system ops
REST API	→	PNG export (scale=2) Variables Node structure

Each layer adds capability without replacing what came before.

What Changed in May 2026

Figma Agent — Now Live

Figma's own canvas-native AI, launched May 20 2026.

- Generate **multiple design directions simultaneously**
- **Bulk-edit** components, rename, convert to dark mode
- Summarize **design critique comments** into an action plan
- Works **inside your Figma file**, not in a separate tool

With our MCP server: Agent refines designs on canvas → MCP reads the result into code → no manual handoff.

Before → After

Before	After
Diagram updated in code, FigJam forgotten	SHA-256 staleness detection — stale diagrams surfaced automatically
Design handoff = screenshot in Notion	MCP reads Figma component tree directly into code
Grep across 14 repos manually	Full-text search: 620+ files, < 100ms
22kb PNG — unreadable at full width	185kb Figma REST export — retina quality
Diagrams land on default board page	Pre-configured section destinations — no manual moves
14 markdown files with different URLs	One <code>curate_diagram</code> call updates all 14 simultaneously

The Numbers

Metric	Result
PNG quality improvement	8× (22kb → 185kb)
Files searchable	620+ across 14+ repos
Search latency	< 100ms
Repos updated per curation call	14 simultaneously
Figma Buzz ROI (3yr)	311% vs build-in-house
Avoided build cost	\$316K–\$480K

What It Solves

For your design team

- Design tokens flow from Figma directly into code — no copy-paste
- Bulk component updates happen in minutes, not days
- Design critique → action plan without a facilitator

For your developers

- Diagrams are always current — staleness is detected, flagged, and tracked
- Design context is readable from the CLI — no browser required
- Cross-repo documentation search works like Google

For your stakeholders

- Stable Figma URLs that never break

Figma Buzz + Campaign Manager

(From RandD existing analysis)

What Campaign Manager Does	What Figma Buzz Does
Campaign planning & coordination	—
Client approvals & collaboration	—
—	Bulk asset generation (100s in minutes)
—	CSV-driven brand variations
Publishing automation	—

0% overlap. 100% synergistic.

ROI: 311% over 3 years. \$316K–\$480K saved vs building in-house.

Training Program

Three tiers. Designed for scale.

Tier	Who	Format	Duration	Outcome
T1 Awareness	All stakeholders	Webinar + demo	30 min	Understands what's possible
T2 User	Designers, PMs	Workshop + playbook	1 day	Uses the framework independently
T3 Admin	Devs, agents	Deep-dive	2 days	Extends and maintains the framework

All sessions recorded. Playbook included. Quarterly updates as tools evolve.

Pricing

Three packages. Choose by scope.

	Starter	Standard	Premium
Framework Setup	✓	✓	✓
T1 Awareness	✓	✓	✓
T2 User Training	—	✓	✓
T3 Admin Training	—	—	✓
Coaching Sessions	1	3	Unlimited (6mo)
Material License	—	1 year	1 year
Retainer	—	—	6 months
Total	€3,500–6,000	€9,000–14,000	€18,000–28,000

What Setup Looks Like

Week 1 — Framework Setup

- Tool configuration: Figma MCP, Claude Code, DocuMind
- Repository onboarding: CLAUDE.md authored per repo
- Central FigJam board: sections created per team

Week 2 — T1 Awareness Webinar

- Live 30-min session with all stakeholders
- Q&A recorded; deck + playbook distributed

Week 3–4 — T2 User Workshop (optional)

- 1-day hands-on for design + product teams
- Real project applied during training

Why DVWDesign

- **Built this framework for ourselves** — 14+ repos, 620+ docs, production since 2025
- **Not a vendor pitch** — we run this stack daily; we know where it breaks
- **Training from practitioners** — every example is from real work
- **Framework-first** — we configure and extend; you own what we build for you

Next Step

Let's scope your setup.

30-minute discovery call — we map your current workflow to the framework, identify quick wins, and propose a phased engagement.

Contact: david@dvw.design

Questions about specific capabilities? We have live demos for every layer of the framework.
